Autodesk acquired Corel Corp, a CAD development company, in March 1996. Corel developers subsequently contributed to the development of CorelDRAW, a product based on CorelCAD (by then renamed from CorelDRAW), that was released in 1998. Q: Substitute columns with values in another table For example, we have a table with columns: id, salary, start\_date, end\_date And we have a table with values: id, name, salary I need a query that substitutes the values of the last table for the columns of the first, in the following way: id, name, salary, start\_date, end\_date I tried the following query, but I'm getting an error: update table1 set table1.start\_date=table2.start\_date , table1.end\_date=table2.end\_date , table1.salary=table2.salary from table1 left join table2 on table1.id=table2.id

A: try this UPDATE table1, table2 SET table1.start\_date=table2.start\_date , table1.end\_date=table2.end\_date , table1.salary=table2.salary WHERE table1.id=table2.id also the JOIN statement requires table1 and table2 to have the same number of columns. UPDATE table1 JOIN table2 SET table1.start\_date=table2.start\_date , table1.end\_date=table2.end\_date , table1.salary=table2.salary WHERE table1.id=table2.id a LEFT JOIN will return only those rows from table1 where there is a matching row in table2 UPDATE table1 LEFT JOIN table2
